

Laboratory 9

A. Initial prompt

Create a one page website for a student beginning their journey on learning chemistry. Add a periodic table. Include sections that contain two-dimensional and three-dimensional molecular structures. Add also a section where they can write what they have learned today with a maximum word count of 300. Add shortcut links to websites such as youtube, pubchem, webmo, and Elsevier journal. In terms of design, use the following color palette with the following hex codes: #ffbb17, #0c1d4b, and #ffffff. Finally, use Montserrat as font.

Presented output

Chemistry Learning Hub Website [Open](#)

Your Chemistry Learning Hub is ready! Here's what's been built:

ChemStart — a complete one-page chemistry website for students, featuring:

- **Full Periodic Table** — all 118 elements, color-coded by 10 categories (alkali metals, noble gases, transition metals, etc.). Click any element to see its name, atomic number, mass, and category.
- **2D Molecular Structures** — interactive Canvas viewer with 6 molecules: Water, CO₂, Methane, Ammonia, Glucose, and Ethanol. Atomic bonds are drawn with correct single/double bond notation.
- **3D Molecular Structures** — [Scroll to latest](#) 3D perspective renderer

B. Refinement Prompts

[Configure myself](#) [Publish now](#)

Improve the cut of section 01, make it softer. Can you increase the word count to 1000 and also add a section where students can draw molecules with measurements 1000 px by 1000 px

Checkpoint made 3 minutes ago

Worked for 2 minutes

In the drawing section, add all elements from the periodic table, but ensure that it is not cluttered.

2 minutes ago

3 actions

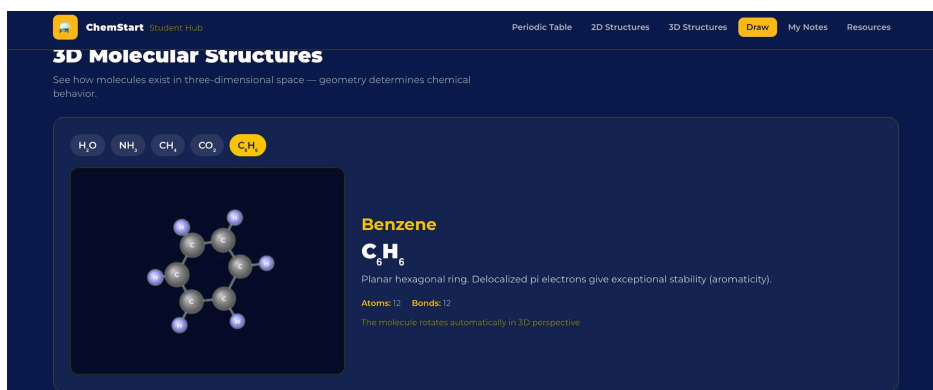

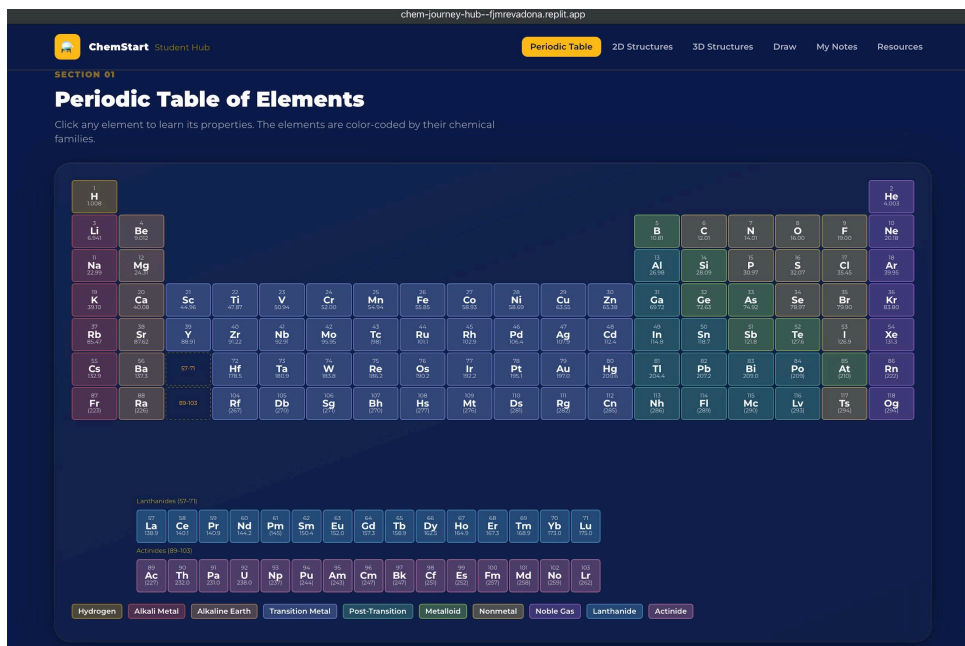

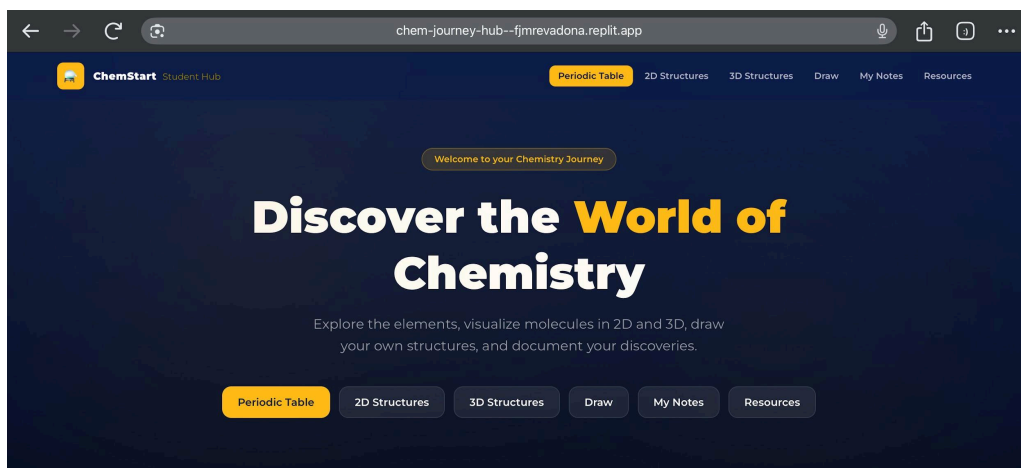

I replace the static list with a searchable, categorized element picker — clean tabs for element groups plus a live search, so all .8 are reachable without cluttering the UI.

ean HMR with no errors. Let me screenshot the drawing section

C. Screenshots of outputs and Website link

complicated prompt. I thought of creating a website specifically for students who would like to pursue a degree of chemistry or those who want to start their learning experience.

Through a detailed prompt, Replit was able to translate what I had in mind through the website it has generated. Although indeed there were some minor details that needed to be changed, but it was still a nice tool for it was able to actualize the concept I had in mind. What worked well in this website is the addition of the periodic table, the addition of 3D models of selected molecules, and the addition of drawing board for molecules.

My main takeaway from this is that the detailed your prompt is, the better the results Replit or any AI tool will give you.
